# **Instagram User Analytics**

#### **Project description:**

This is a project about Instagram User analysis in which I helped the attempt to derive business insights for marketing, product & development teams by providing the data to them by using SQL(structured query language) On this process am using several SQL queries to get the desired data Through the project I founded the top oldest user, whether the user posted any picture or not, most commonly used hashtag, total number of users and many several insights of the Instagram from the data provided

#### Approach:

Firstly, I went through all the tables given in the dataset to get some clarity about what the data is about and what we could obtain or interpret from the given dataset. Then I imported the data in my Mysql software to understand the data further in order to find the insights of the data required for growth of the company

#### Tech stack used:

I used MySQL Workbench 8 0 CE

#### Insights:

I executed different queries to provide solution for the given tasks. I got to know how to use my sql skills to provide solutions for different questions of the company which would be very much useful for their further development of business

#### **Result:**

After I executed queries in my mysql, I took the results data and saved it

#### A) Marketing:

#### 1) Rewarding Most loyal users:

People who have been using the platform for the longest time.

#### Query:

USE ig\_clone;

SELECT username

FROM users

ORDER BY created\_at

LIMIT 5;

#### **Result:**

|   | username         |
|---|------------------|
| • | Darby_Herzog     |
|   | Emilio_Bernier52 |
|   | Elenor88         |
|   | Nicole71         |
|   | Jordyn.Jacobson2 |

# 2) Remind Inactive users to start posting:

Find the users who have never posted a single photo on Instagram.

#### Query:

USE ig\_clone;

SELECT u.username

FROM users u

LEFT JOIN photos p ON u.id=p.user\_id

WHERE p.user\_id IS NULL

ORDER BY u.username;

#### Result:

I exported the retrieved data in an excel sheet and took snapshot

## 3) **Declaring Contest winner**:

Identify the winner of the contest and provide their details to the team.

# Query:

```
USE ig_clone;

SELECT users.username, COUNT(*) AS total_likes

FROM likes

JOIN photos ON photos.id=likes.photo_id

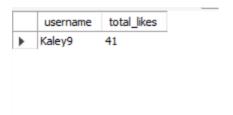

JOIN users ON users.id=likes.photo_id

GROUP BY photos.id

ORDER BY total_likes desc

LIMIT 1;
```

#### **Result:**

### 4) Hashtag researching:

Identify and suggest the top 5 most commonly used hashtags on the platform.

#### Query:

```
USE ig_clone;

SELECT t.tag_name,COUNT(p.photo_id) as num_tag

FROM photo_tags p

JOIN tags t ON p.tag_id=t.id

GROUP BY tag_name

ORDER BY num_tag DESC

LIMIT 5;
```

## **Result:**

|   | •        |         |
|---|----------|---------|
|   | tag_name | num_tag |
| ١ | smile    | 59      |
|   | beach    | 42      |
|   | party    | 39      |
|   | fun      | 38      |
|   | concert  | 24      |

# 5) Launch AD Campaign:

What day of the week do most users register on? Provide insights on when to schedule an ad campaign

# Query:

USE ig\_clone;

SELECT DAYNAME(created\_at) AS Days,COUNT(\*) AS total

FROM users

**GROUP BY Days** 

ORDER BY total DESC

LIMIT 2;

#### Result:

|   | Days     | total |
|---|----------|-------|
| • | Thursday | 16    |
|   | Sunday   | 16    |

#### **B) INVESTOR METRICS**

#### 1) User Engagement:

Provide how many times does average user posts on Instagram. Also, provide the total number of photos on Instagram/total number of users

#### Query:

WITH CTE AS (SELECT u.id AS userid, COUNT(p.id) AS photoid

FROM users u

LEFT JOIN photos p ON u.id=p.user\_id

GROUP BY u.id)

SELECT SUM(photoid) AS total photos ,COUNT(userid) AS total\_users , SUM(photoid)/COUNT(userid)

FROM CTE

#### **Result:**

# 2) Bots & Fake accounts:

Provide data on users (bots) who have liked every single photo on the site.

#### Query:

USE ig\_clone;

WITH photo\_count AS(SELECT user\_id,COUNT(photo\_id) AS num\_like

**FROM likes** 

GROUP BY user\_id

ORDER BY num\_like DESC)

**SELECT** \*

FROM photo\_count

WHERE num\_like =(SELECT COUNT(\*) FROM photos)

# **Result:**

| user_id | num_like |  |
|---------|----------|--|
| 21      | L 257    |  |
| 71      | L 257    |  |
| ŗ       | 5 257    |  |
| 66      | 5 257    |  |
| 41      | L 257    |  |
| 14      | 1 257    |  |
| 57      | 7 257    |  |
| 24      | 1 257    |  |
| 76      | 5 257    |  |
| 75      | 257      |  |
| 54      | 1 257    |  |
| 91      | L 257    |  |
| 36      | 5 257    |  |
|         |          |  |
|         |          |  |
